CIUDADES

WORKWEAR COLLECTION

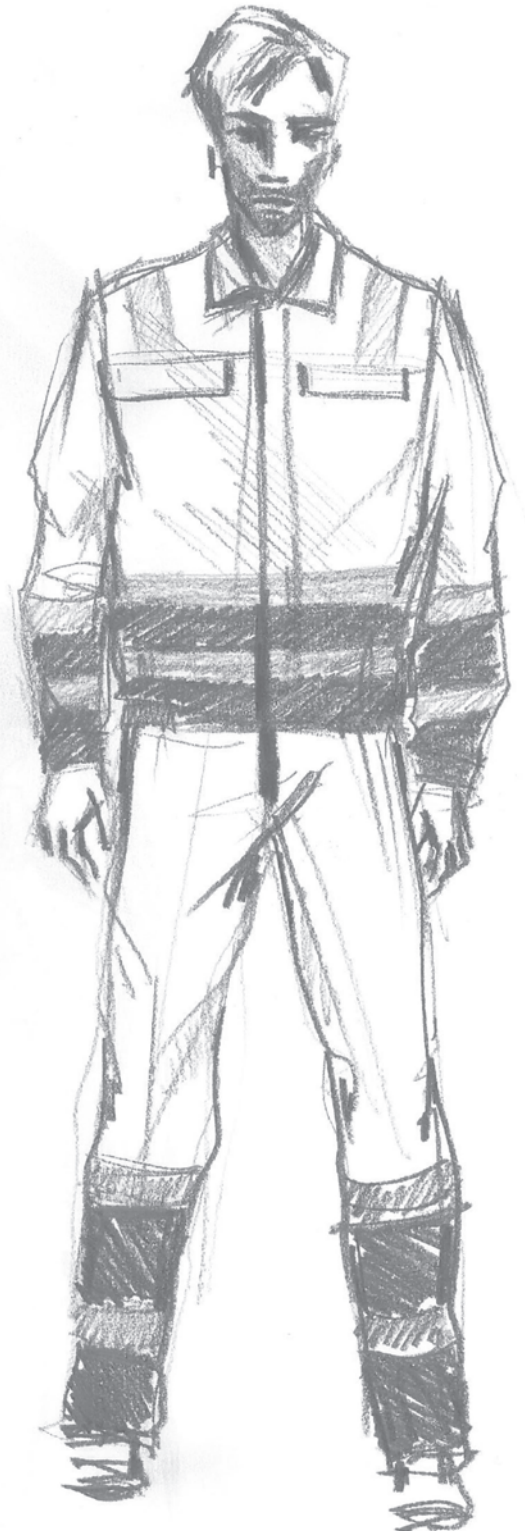

CIUDADES workwear collection was primarily developed for warmer climate regions of South Europe, Middle East and northern parts of Africa. It consists of a complete range of garments available in a wide variety of colours. Its core products are produced from lightweight fabric of 195 g/m² composed of 65 % polyester and 35 % cotton.

Characteristic simple cut is typical for the collection's workwear jackets, waist and bib pants, overalls and shorts. A common element specific for this collection of garments is the noticeable pocket design. The typical "BASIC" version of the **CIUDADES** collection is offered in 7 appealing colour combinations – basic black, dark blue, royal blue, green, red, white and grey.

The "REXLEX" workwear line of the **CIUDADES** garments collection, whose fit and colours are based on the "BASIC" collection, is intended for higher safety and visibility at work. It is complemented with reflective stripes on shoulders, sleeves and body parts of jackets; these reflective stripes are sewed on the bottom part of legs on pants, overalls and shorts.

The top HI-VIS line of **CIUDADES** garments collection fulfils safety classification # 1 and # 2 according to EN ISO 20471. These specific workwear garments are made using light fabric that is composed of 50 % cotton and 50 % polyester in twill-weave. The high cotton content guarantees the required breathability for work in warmer climate conditions. The wearing comfort and breathability of the fabric are improved by low material weight. The used twill-weave technology increases the final fabric strength. In addition to the basic combination of HI-VIS yellow and orange colours, the collection also offers the combination of HI-VIS and dark blue colours.

The whole collection of **CIUDADES** garments is completed with stylish T-shirts, polo-shirts, and fleece and softshell jackets.

CIUDADES COLLECTION

CIUDADES workwear collection is available in 3 lines - basic, reflex and hi-vis which can be combined with each other.

The main difference is in high-visibility category and material - the Hi-Vis line is made of a unique Lumicotex material which combines cotton and polyester.

HI-VIS LINE

REFLEX LINE

BASIC LINE

HI-VIS LINE

LUMICOTEX®

The combination of 50 % cotton and 50 % polyester ensures excellent breathability for work in hot climate conditions.

The low material weight enhances comfort. Moreover, the used twill-weave technology increases ultimate strength of fabric. In addition to the basic combination of HI-VIS yellow and orange colours, the collection also offers the combination of HI-VIS and dark blue colours.

The top HI-VIS line of CIUDADES garments collection fulfils safety classification # 1 and # 2 according to EN ISO 20471.

MODERN FIT

The (I)UDADES Workwear collection is distinguished by a unique and comfortable fit you will not want to take off. (Clothing is made of a material that allows free movement and high comfort. This collection is simply designed to suit almost everyone.

EXPLANATORY NOTES

	Suitable for winter
	Extra large
	Waterproof material
	Breathable material
	EN ISO 20471 - High-visibility warning clothing for professional use

INFORMATION FOR PROPER USE OF HIGH-VISIBILITY WARNING GARMENTS ACCORDING TO VALID STANDARDS

The Labour Code obliges the employer to provide workers personal protective equipment when using collective protection was not possible to eliminate risk or minimized to an acceptable level. To reduce the risks arising from possible injuries due to poor visibility – conspicuousness worker is necessary to use adequate warning garments with high visibility.

The requirements for the warning garments with high visibility are defined by EN ISO 20471, published in 2013 or EN 471 + A1: 2007 (or earlier EN 471: 2003), which shall remain applicable for garments made at the time of these older standards.

Standard divides garments into classes graded by surface materials with high visibility:

GARMENTS CLASSES

Material	Class 1	Class 2	Class 3
Background material	0,14 m ²	0,50 m ²	0,80 m ²
Reflective material	0,10 m ²	0,13 m ²	0,20 m ²
Combined material	0,20 m ²	-	-

MINIMAL REQUIREMENTS

In the standard are the minimum requirements for the design of clothing with regard to the placement and the number of elements with high visibility.

To ensure the highest possible level of protection (even when bending) should be warning garments with high visibility also equipped with vertical retroreflective stripes.

For work on roads and railway tracks, where is no ongoing traffic (new roads, repair of existing roads with the complete elimination of traffic) and close to them is the minimum class of garment n.2 – Intermediate level of protection.

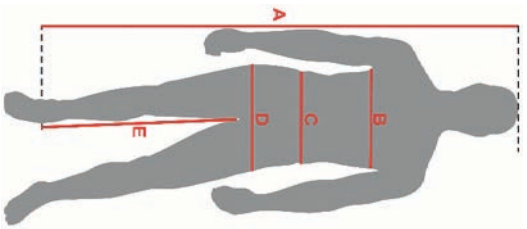

For work on roads and railway tracks, where is not completely excluded traffic and close to them is the minimum class of garment set n.3 – Highest level of protection.

Warning garments with high visibility should be used in minimal combination: overalls, bib PANTS or PANTS with belt or braces complemented with coat or vest, which meets the requirements of the appropriate class according to EN ISO 20471: 2013.

[overall Class 2 or Class 3 if required, trousers Class 1, vest or jacket Class 2 or Class 3 per requirement].

IMPORTANT

To comply the requirements for providing of PPE personal protective equipment – High-visibility warning garments – is required to meet the Government Regulation 21/2003 Coll., Laying down technical requirements for personal protective equipment. Meeting the requirements of Government Regulation 21/2003 Coll. We can prove certification according to EN ISO 20471: 2013. If the employer provides its employees garments based on individual clothing patterns and design, that comply with some or all of the above requirements for the material and reflective elements, but it is not actually certified, it runs the risk of responsibility for the providing of inappropriate PPE personal protective equipment to their employees.
