

RAVNE KNIVES

for
metal industry

CUTTING PROBLEMS? WE ARE SPECIALISED IN SOLVING THEM!

Our product range for the metal industry includes:

- Shear blades for cold and hot cutting
- Scrap chopper blades
- Profile shear blades
- Rotary slitter knives
- Side trimmers
- Slideways
- Bending tools

Ravne metal knives — for each material
the right knife

Metal is a synonym for toughness. We can help you select the right knife to master it!

The wide choice of high-grade steels from our own production program allows production of all types of shear knives.

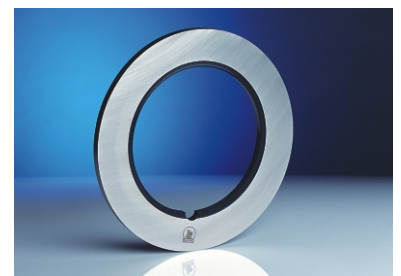

Ravne knives for the metal industry are used in mills, fabricating plants and for machine building.

Straight shear blades can be manufactured up to a length of 6000 mm (236"), circular shear blades up to a diameter of 1400 mm (55").

With the help of many decades of experience and constant development we can offer the optimum solution for your cutting problem. Our shear blades are precision tools and meet international standards.

At Ravne we are aware that only the best tool can guarantee appropriate work and continuous production.

Tradition combined with precision guarantees a constant high standard of quality.

Ravne slideways - a match to your machine

Ravne slideways for processing machines represent an essential machine part, as they allow the motion of individual machine parts. They are built into high performance machine tools, machine centres, measuring instruments etc.

Slideways are a most demanding product in view of its precision.

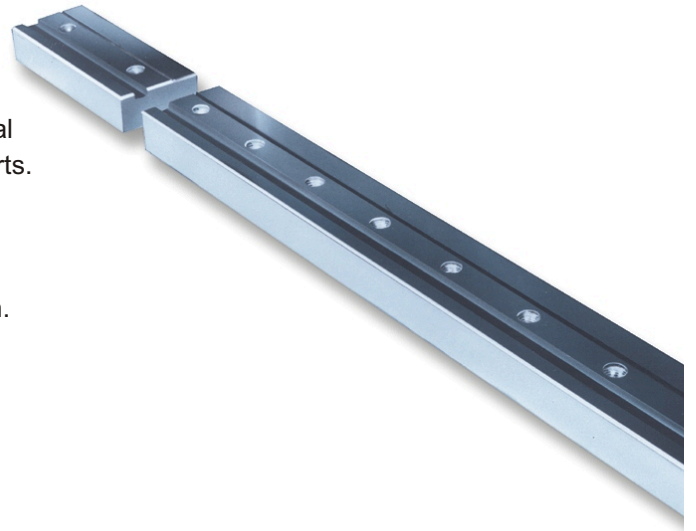

Ravne slideways offer the following advantages :

precise machining

high strength and rigidity

uniform surface hardness.

We can produce slideways either through hardened, surface hardened on some parts or cemented on the surface and then through hardened.

Ravne bending tools - a consistence of shapes

Ravne bending tools can be produced in accordance with your needs up to a length of 6000 mm (236") for sheet bending into various shapes.

They can be produced in quality hardening and tempering steel.

Appropriate heat treatment enables us to achieve high strength of tools, wear resistance and dimensional consistence of shapes.

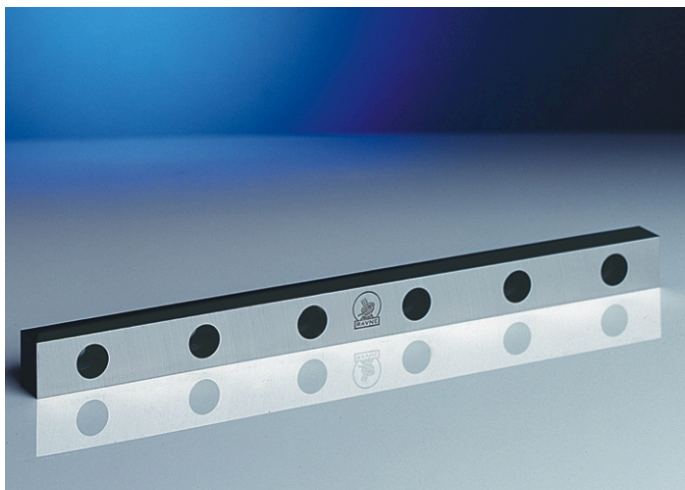

Ravne bending tools are used in the:

household industry

automotive industry

industry of agricultural machines

building industry
