Wrought iron

Residential sectioned garage doors

Characteristics of sectioned panels configure the most modern and safe actual garage doors:

- external coat in galvanized steel, with polyurethane insulation, total thickness of 42 mm;
- provided with protection foil for the internal part and for the external one in order to avoid scratches and damages during transportation, assembling and manipulation;
- available in two dimensions on height: 495 mm and 615 mm;
- provided with protection against fingers catching;
- they correspond entirely to the European Union's regulations, directive EN 13241-1
- are made so that the joints to be perfect;
- equipped with seal gaskets in order to assure a perfect insulation, to avoid the passage of air and dust;
- thermal insulation coefficient: $u = 0,52 \text{ W/sqmK}$;
- sides are closed with covers in painted galvanized steel, which increase the panels resistance;
- treatment applied to the panels offers them a high resistance against corrosion.
- on the interior are provided with a metallic tape, with double reinforcement, for the fixing of hinges.

Industrial doors

General characteristics of industrial panels are common with those of residential panels:

- are equipped standard with protection system against arch breakage;
- are equipped standard with protection system against cable breakage
- they can be operated manually (reducer on chain) or automatically

Roller doors

In order to supplement the rage of the offered products, Dusadoor sells also roller doors.

Resistant and elegant, they combine perfectly the aesthetic aspect and utility. They also offer thermal and phonic insulation, due to the aluminum lamellae with polyurethane foam on the interior.

Unlike the other classic alternatives roller doors can be assembled on the external part of a hole, between holes or inside the building. This mobility follows the elimination of the traditional rails, the door rolls ergonomically, leaving more efficient space available.

Rolling grilles

The rolling grilles Nyos by Dusadoor assure an efficient protection of the values and goods from any space*.

They prevent vandalism, unauthorized access, and most importantly, they constitute an impenetrable shield against home invasions. The material used in metal grillage production is the galvanized steel.

The rolling grilles are manufactured in several configurations and models and they can be mobile and fixed, automated or manually operated through an ergonomic handle. The assembling can be made in several manners, according on requests or/and configuration of the space

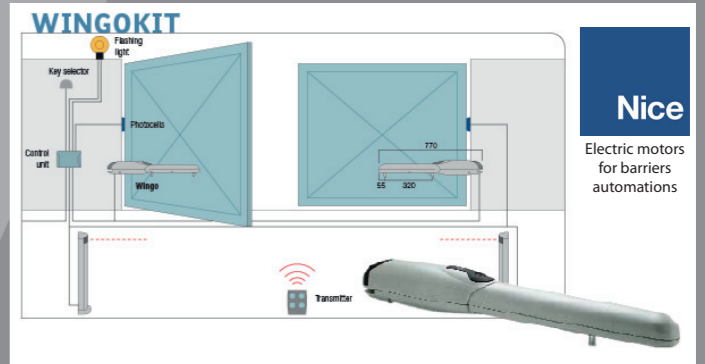

*retail spaces, drugstores, banks, stores, shop fronts, restaurants and others. Having a special aesthetic aspect, they are ideal also within residential spaces for the closing of garages, swimming pools, gazebos, terraces or annexes.

Doors, gates, barriers automations

Dusadoor offers you automations for the residential and industrial regime, for swing or sliding doors.

The collaboration with a prestigious brand Nice-Italy offers multiple variants for automation, according to the dimensions and weight of the gate.

Models for swing automations: standard automation (having arms depending on the dimensions and weight of the gate) articulated or deepened.

Wrought iron

Wrought iron can be used with decorative role for the vintage, rustic or even Mediterranean arrangements. It's an elegant material, bringing refinement to certain elements as for example: gates, fence panels, balustrades, and grillage. Each product can be manufactured according an unique profile and model, in order to fit to a variety of styles, spaces and destinations. Bring a unique, elegant air to your home, with objects made of wrought iron by Dusadoor brand.
